HQC Series

Instrumentation Quick Couplings

Features

- Leak tight sealing is achieved through multiple o-ring seals located in the couplers. Buna N is standard in brass and Viton® is standard in 316 stainless steel.
- Poppet valves with dependable, integral o-ring seals are standard in coupler and plug in double-end-shutoff applications. In single-end shutoff applications the poppet valve is installed in the body half.
- Positive valve stops prevent flow checking in the body.
- Valve guides align valves exactly to the coupler's valve seat preventing chance of leakage when in a disconnected mode.
- Locking mechanisms in bodies provide smooth positive sleeve engagement. A firm grip of the plug portion of the coupling assembly is assured with HOKE's Teflon®-bonded stainless locking "dogs".
- 316 stainless steel springs: all coupler and valving springs are constructed from 316 material.
- Gyrolok® nut and ferrule system provides leak-tight end connection.
- Keyed sleeves for all sizes
- HOKE HQC Series quick couplers are interchangeable with Swagelok®, Parker®, and TOMCO® components of the same style.

HQC Series Instrumentation Quick Couplings

HOKE Color Coded “Keyed” Quick Couplers

HOKE Keyed Quick Couplers will only fit mating Keyed components, preventing accidental mixing of fluid or pressure lines.

Body and plug assemblies are numbered and color-coded for positive identification.

HOKE Keyed HQC Series quick couplers are interchangeable with Swagelok®, Parker®, and TOMCO® components of the same style.
